MEMSOURCE

Memsource Certified Trainers Part 3: Technicalities

After the third training session, you should be able to:

1. Understand file import settings:
   a. Have an idea about what file types can be imported to Memsource.
   b. Understand that for many file types, there are various options to choose from.
   c. Be able to process at least basic file formats, i.e.
      i. MS Word
      ii. MS Excel vs Multilingual MS Excel
      iii. MS Powerpoint
      iv. HTML
      v. XML vs Multilingual XML
      vi. XLIFF
   d. Have at least some basic understanding of regular expressions and XPath, not necessarily to an extent of being able to create rules, but at least to know which sections of Memsource documentation to consult when needed.
   e. Understand that for some file types, it is necessary to work with the character set (encoding) correctly.
   f. Understand that it is possible to adjust segmentation rules (see below).
2. Understand how context can be defined to make use of exact and in-context matches.

Please consult our documentation for details, or search our knowledge base for more specific answers.
